

St Laurence's College is a Catholic school for boys in the Archdiocese of Brisbane, operating since 1915. The school educates students from Year 5 to Year 12, drawing from a wide area of Brisbane. The Urban Farm, established in 2015, is used extensively in the Geography curriculum area, as well as for supervised extra-curricular activities 3 afternoons a week. Students engage in manual tasks to maintain the farm and work on projects to improve and expand the popular facility. Boys regularly practice problem-solving, teamwork, communication, creating and leadership skills.

"Adopting and promoting sustainable food production practices require concerted effort, something which in practice is too often missing or insufficient. Making this shift at the scale required demands forward-looking leadership in the public and private sectors alike."

Helen Clark, UNDP Administrator
