# MINDSTORM EV3 Curriculum content

In order to use the curriculum materials you need to have the LEGO MINDSTORMS Education EV3 software installed. These resources focus on students aged 10-16 with links to national curriculum standards. Includes student-ready resources, full teacher support, assessment tools, sample programs, and building instructions.

# Digital Technologies

## GRADE 7 - 8

Strand		Content Descriptions	Elaborations	Teacher notes
Process and production skills	Defining	Define and decompose real-world problems taking into account functional requirements and economic, environmental, social, technical and usability constraints (ACTDIP027)	Identifying that problems can be decomposed into sub elements, for example creating a decision tree to represent the breakdown and relationships of sub elements to the main problem or identifying the elements of game design such as characters, movements, collisions and scoring	Create instructions for program including loops and switches for FIRST LEGO League Challenge or RoboCup competition. Create Flowchart showing robot instructions. Use Flowchart to evaluate robotic system and incorporate flowchart in FIRST LEGO League robot design presentation.
	Designing	Design algorithms represented diagrammatically and in English, and trace algorithms to predict output for a given input and to identify errors (ACTDIP029)	Using diagrams to describe key decisions, for example creating flowcharts using digital systems to describe a set of computational instructions	
			Using structured English to express algorithmic instructions, for example using conventional statements such as 'while' and 'endwhile' in a 'while loop' when describing interactive instruction	
	Implementing	Implement and modify programs with user interfaces involving branching, iteration and functions in a general-purpose programming language (ACTDIP030)	Programming a robot to recognise particular objects and to treat them differently, for example choose objects based on colour	Program an EV3 colour-sorting robot using the colour sensor.

# SCIENCE

# GRADE 7

Strand	Content Descriptions	Elaborations	Robotics activities	Teacher notes
Science Understanding	<b>Physical sciences</b> Change to an object's motion is caused by unbalanced forces acting on the object. (ACSSU117)	Investigating the effects of applying different forces to familiar objects.	<b>Design and build an amusement park ride using pulleys and gears</b> Investigate how simple machines (levers, ramps, gears and pulleys) reduce effort and/or force. Use gears to change the speed and direction of the ride.  <b>Design a 'safe' robot car and investigate the use of seatbelts by testing different power levels and ways of stopping car (brake or coast).</b>	Minifig can be placed on car. How far forward does it travel at different Powers (velocities).
		Investigating common situations where forces are balanced, such as stationary objects, and unbalanced, such as falling objects.		
		Investigating a simple machine such as lever or pulley system.		
Science as a Human Endeavour	Use and influence of Science Science understanding influences the development of practices in areas of human activity such as industry, agriculture and marine and terrestrial resource management. (ACSHE121)		Give examples of robots working in industry, agriculture etc.  What advantages does a robot have over a human worker?  What disadvantages?  What type of jobs will robots have in the future?	

# MATHEMATICS

## GRADE 7

Strand	Content Descriptions	Elaborations	LEGO Education	Teacher notes
Numbers and Algebra	<b>Patterns and algebra</b> Introduce the concept of variables as a way of representing numbers using letters. (ACMNA175)	Understanding that arithmetic laws are powerful ways of describing and simplifying calculations and that using these laws leads to the generality of algebra.	<b>For a robot car - draw up a table for a series of trials.</b>  <b>Distance (d) travelled and a uniform increase in Duration Time (t).</b>	Identify a relationship between d and t. Express algebraically.  Use relationship to predict (and actual) time required to stop robot in front of LEGO minifig (teacher specified distance).  Use relationship to predict time to travel 1m, 1km, 1000km (from Sydney to Melbourne).
	<b>Patterns and algebra</b> Create algebraic expressions and evaluate them by substituting a given value for each variable. (ACMNA176)			
	<b>Real Numbers</b> Recognise and solve problems involving simple ratios. (ACMNA173)	Understanding that rate and ratio problems can be solved using fractions or percentages and choosing the most efficient form to solve a particular problem.		
	<b>Real Numbers</b> Round decimals to a specified number of decimal places. (ACMNA156)	Using rounding to estimate the results of calculations with whole numbers and decimals, and understanding the conventions for rounding.

### Connect EV3 Brick to iPad

1. On your EV3 Brick, go to Settings and open Bluetooth.
2. Enable both Bluetooth and iPhone/iPad/iPod.

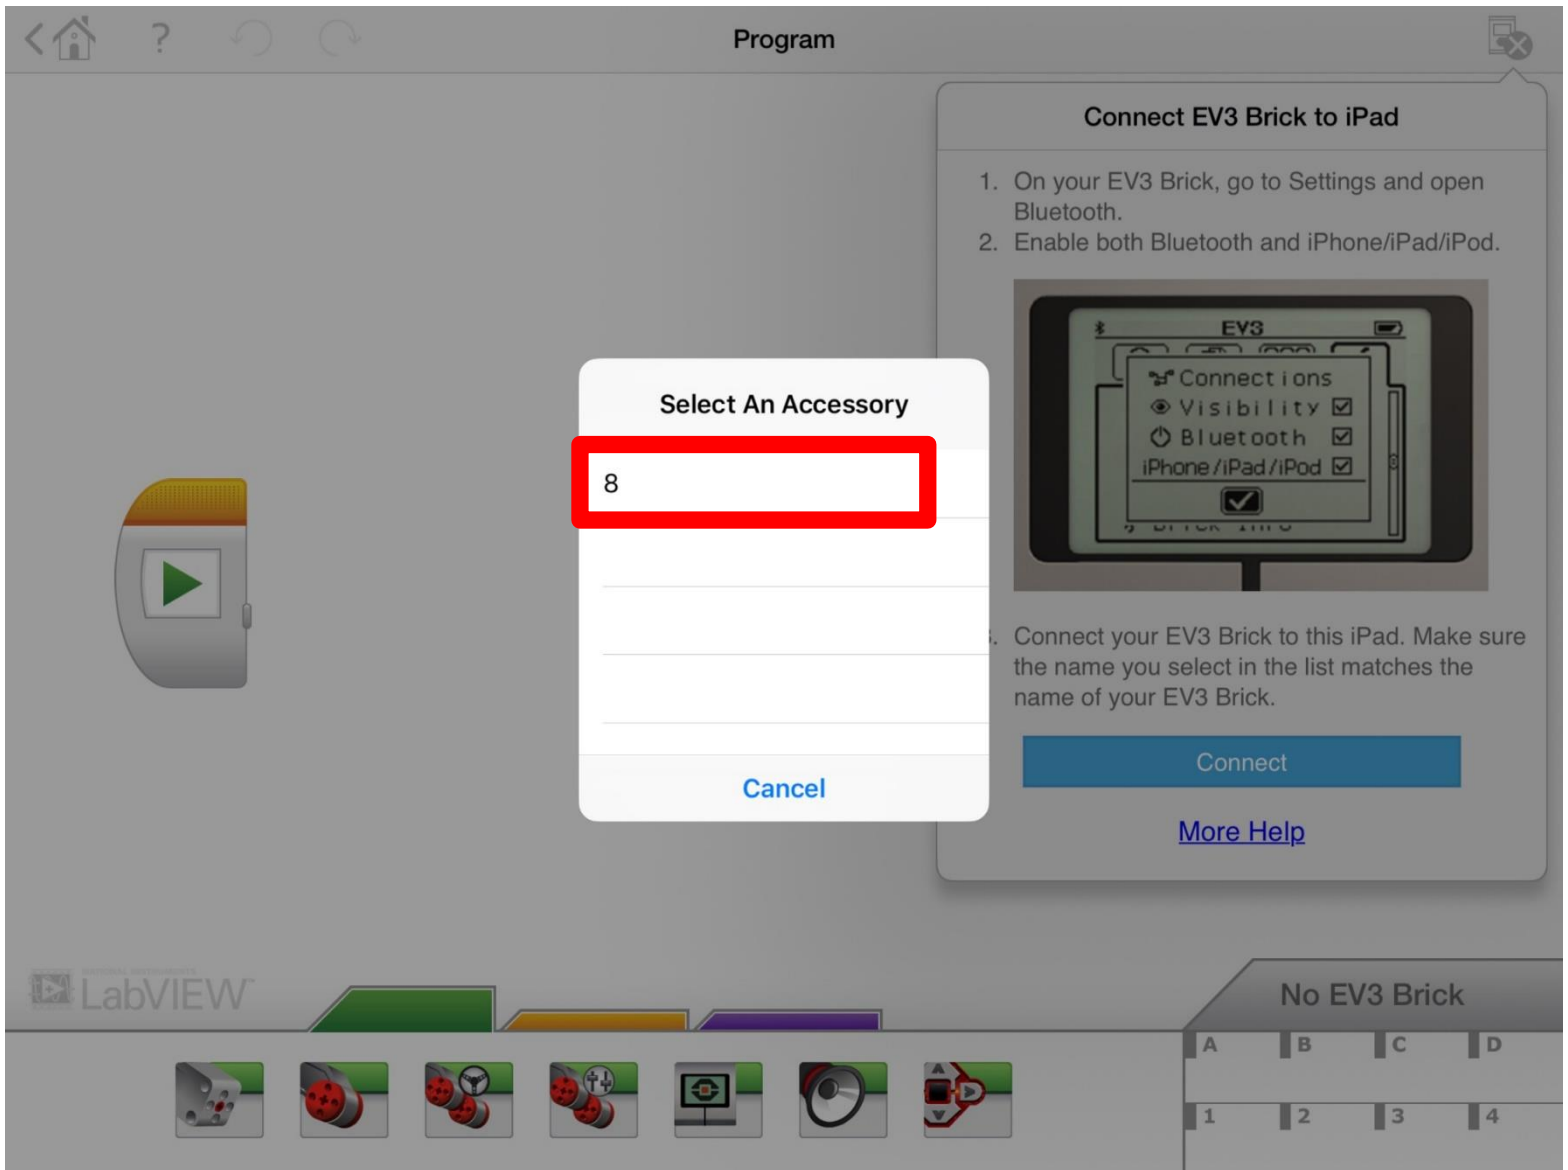

3. Connect your EV3 Brick to this iPad. Make sure the name you select in the list matches the name of your EV3 Brick.

# Quick play with these settings ..

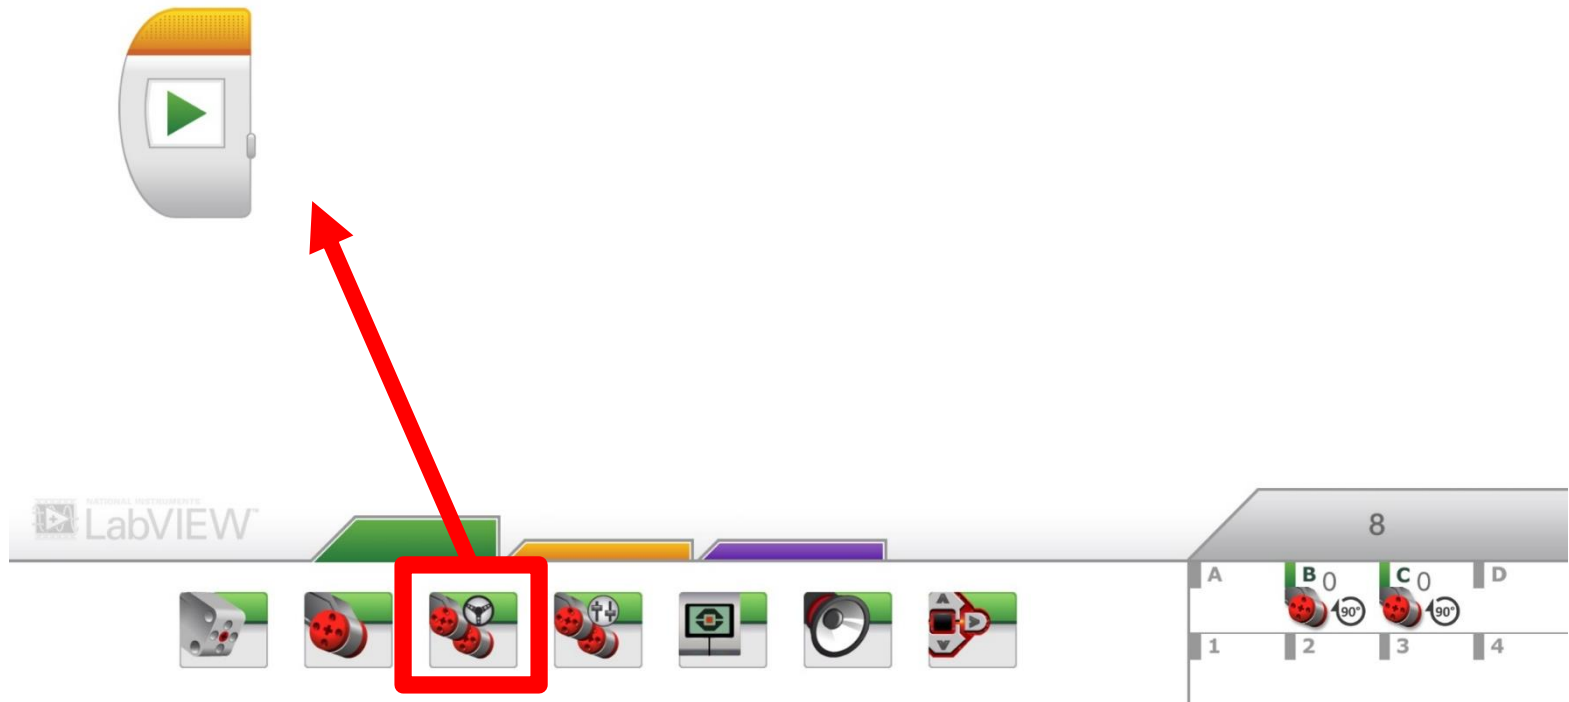

# Delete the Block

# Add a new Move block

# Basic Information for the Challenge

# Going the Distance

## The Challenge

Daredevil Dan is preparing for an amazing stunt. As Daredevil Dan's stunt coordinator, your challenge is to build and program a robot car to drive as close to Dan as possible, without knocking him over!

## Constraints

This is a “dead reckoning” challenge. You are not allowed to use any sensors to detect Dan.

You will have a time to practise making your robot drive various distances. At the end of the practise time, Dan will announce exactly far from the starting line he will be. You will then have time to program your car, but you may not test it.

Once all the cars are programmed, they will take turns driving from the starting line. The car that finished closest to Dan without knocking him over is the winner!

Work out the relationship between rotations and distance using the A3 sheet i.e. 15cm and 40cm

Then:  
I'll give you the distance to Dan!

Using the Robot, work out how many rotations is needed to go 15cm.  
Work out the relationship between distance and rotations.  
Calculate how many rotations to travel 40cm.  
Test your calculation using the robot.  
Check your formulae for the relationship between distance and rotation  
Calculate how many rotations to travel NEW DISTANCE.  
WAIT UNTIL ALL THE GROUP IS READY TO TEST TOGETHER ....

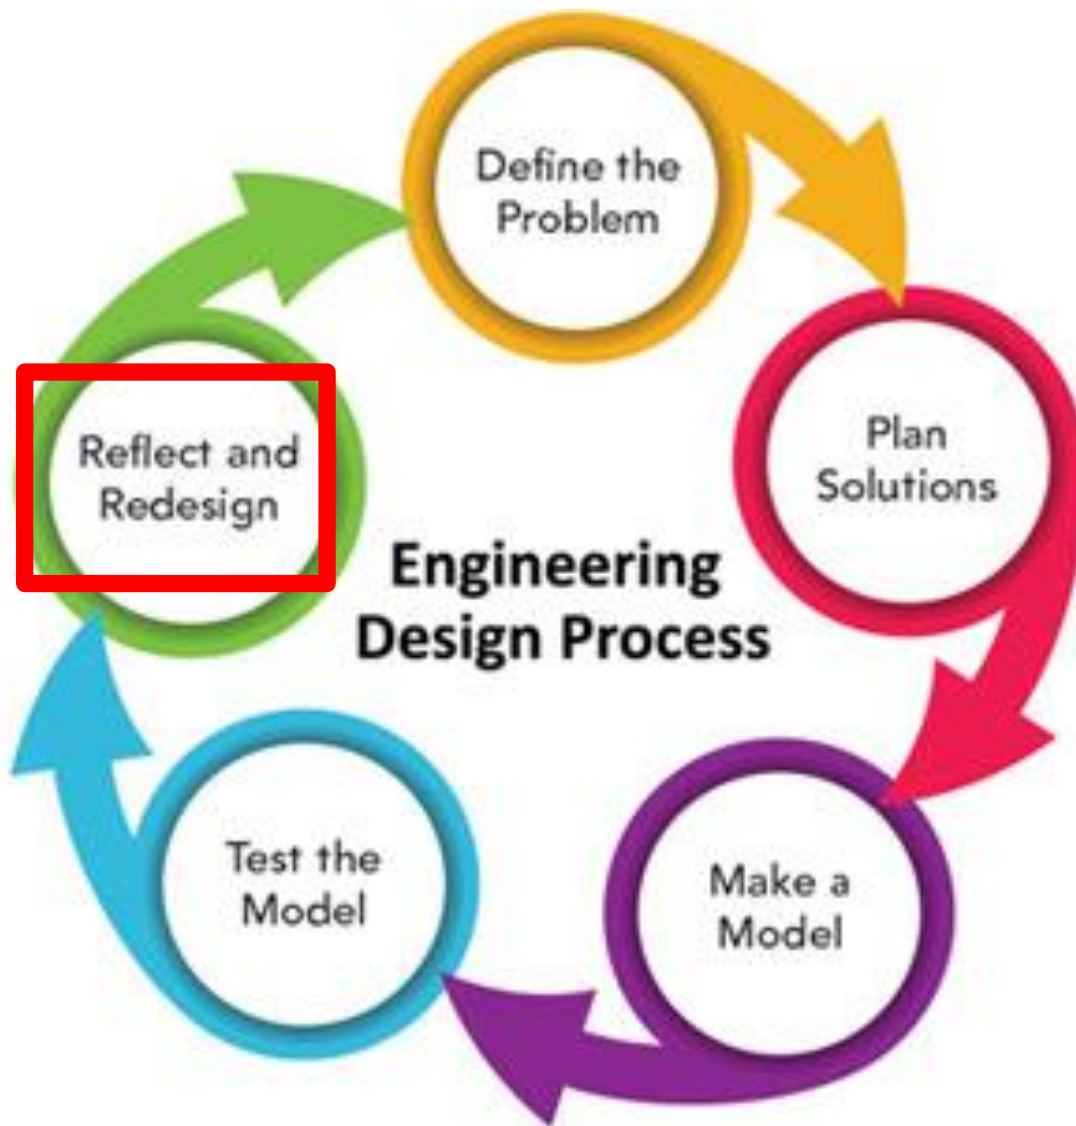

Predict how far  
1 rotation is.

Distance is

2m

Test your Calculations

Retest your Calculations

What did you learn?

# Science - Transfer of Energy

A battery has **chemical** potential energy in the **electrolyte** in its electrochemical cells.

# Technology

## **PORTS, SENSORS, MOTORS**

# Engineering

# Maths - How far does 1 rotation go?

# Assessment

Your grade will be based on an average of these two criteria...

Grade	Performance	Creativity & aesthetics
A+	Your car finishes the closest, without knocking over Dan. Evel Knievel would be proud!	Best in show!
A	Your car finishes within 100mm, without knocking over Dan	Outstanding
B	Your car finishes within 400mm	Good
C	Your car moves forward!	Okay
t	You have something resembling a vehicle	Nothing special
Z	You run away!	Look away!

Any Questions or Comments?

# Packing Up Instruction

- Put all LEGO Robots parts shown on the back of the Build Guide in the Red Box.
- Return the Build Guide sheet and Distance Sheet
- You can keep the LEGO consumable parts or put them in box in the front 😊

Thank you for a great workshop.
